

Francisco Javier De Freitas

Senior Backend Engineer

Lima, Peru | Open to Remote Opportunities

Senior Backend Engineer with 8+ years of experience building scalable distributed systems and cloud-native applications using Node.js and TypeScript.

Strong expertise in backend architecture, NestJS, AWS, event-driven systems, and technical leadership. Experienced mentoring engineers, driving architectural decisions, and delivering high-impact enterprise solutions across fintech, entertainment, analytics, and AI products.

Node.js • TypeScript • NestJS • AWS • Distributed Systems • Microservices • Event-Driven Architecture

Core Skills: Node.js, TypeScript, NestJS, React, Vue.js, AWS, GCP, PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ, Docker, Hexagonal Architecture, Event-Driven Systems, Microservices.

Spanish: Native

English: Professional Working Proficiency (B2)

Portuguese: Professional Working Proficiency (B2)

PROFESSIONAL EXPERIENCE

Globant | Senior Backend Engineer | 2022 – Present

Command Alkon

- Introduced an ADR (Architectural Decision Record) framework that standardized technical decision-making and reduced undocumented architectural dependencies across teams.
- Led architecture spikes and technical research initiatives to evaluate scalable third-party solutions and establish engineering documentation standards.
- Designed and executed idempotent large-scale production migration scripts for critical business data with zero downtime impact.
- Mentored engineers on SOLID principles, design patterns, and Hexagonal Architecture, improving code maintainability and team autonomy.
- Delivered highly reliable production-grade code with strong automated testing coverage, significantly reducing QA regression cycles.

Disney Parks

- Developed scalable backend services and internal enterprise platforms using Node.js, NestJS, and Vue.js.
- Contributed to a Server-Driven UI ecosystem powering dynamic user experiences across enterprise applications.
- Refactored backend services following scalable architecture and software engineering best practices.
- Built reusable engineering tooling and Yeoman generators to streamline development workflows.
- Conducted technical interviews and contributed to engineering hiring decisions across multiple teams.
- Coordinated distributed engineering efforts across multiple countries, supporting mentoring and delivery alignment.

Interbanking

- Migrated backend services to NestJS and AWS Lambda architectures to improve scalability and maintainability.
- Implemented Hexagonal Architecture patterns and reusable internal libraries for shared business

- logic.
- Developed S3-based file processing pipelines converting Excel and CSV data into structured JSON workflows.

SAPIA / Cognitiva | Artificial Intelligence Specialist | 2021 – 2022

- Developed cloud-native microservices and distributed systems using Node.js and Docker.
- Built integrations with SQL and NoSQL databases, including PostgreSQL, MongoDB, and Redis.
- Implemented event-driven communication pipelines using Kafka and RabbitMQ.
- Deployed and managed services across Azure, GCP, and IBM Cloud environments.

HAVAS MEDIA GROUP | Full Stack Developer | 2020 – 2021

- Implemented analytics solutions and cloud-based integrations using GCP and Node.js.
- Developed and modified web solutions focused on analytics and user behavior tracking.

ATTACHMEDIA | Digital Analytics Engineer | 2019 – 2020

- Developed APIs, cloud integrations, and interactive web applications using Node.js and Vue.js.
- Managed deployments and cloud services using Firebase and Google Cloud Platform.
